

# Enabling Federation to the Cobweb Lync Platform

Last Modified on 24/10/2019 4:47 pm BST

In order to connect with other Lync platforms the other organisation will need to add your FQDN (Fully Qualified Domain Name) to their platform.

The Cobweb Hosted Lync 2013 platform is already enabled for federation with other organisations.

## Enabling Federation with Cobweb

Full instructions on how to configure federating with another platform are explained [here](#).

The settings required are:

Domain name: *Yourdomain.com*  
Access Edge Service: *access.hs20.net*

This needs to be completed for every domain name that uses Lync.
